Dear Ms Anna Halbrooks,

It would be an amazing pleasure to be apart of the CareerHub team. I believe I will fit the role well based on my past work experiences, at Tyeware I used C# with .NET to provide a web interface for clients. As well I was required to write SQL scripts for easily and quickly looking up and storing of data. I am also undertaking my superthesis project at the moment where I am building a webapp (and a phoneapp) for a smarthome ecosystem, from this I have gained a lot of experience in different web technologies; such as React / React Native and Typescript.

I also enjoy being challenged and learning as a result, and I believe this only helps me to become more efficient and skilled as a programmer. I also understand the importance of customer communication and satisfaction, for me it is important to make sure the customer is aware of any changes made and kept up to date on the status of their product.

Thank you for your time and I look forward to hearing a response,
Daniel
