Dear Powerlink Queensland,

It would be my pleasure to be given the chance to work and be apart of the Powerlink Queensland team. I have a strong passion for working with smart systems and enjoy when multiple different subsystems all communicate and work together to provide an overall networked system. I believe I am fit for the responsibility because of ability to constantly adapt to new and different environments, as well as being able to quickly learn and understand new systems and architectures.

I also believe I have some experience and have demonstrated in my current and previous work my capabilities that will help to serve me in this role. Through my current superthesis project, where I am working on building a webapp which interfaces with a smarthome ecosystem. Or with my previous job experiences where I have learnt how important it is to always have the client's goals and needs as the driving focus for development and support.

Thank you for your time and I look forward to hearing a response,  
Daniel
