Dear Aurecon,

Having the privilege to work with the Aurecon team and gain valuable knowledge would be an amazing honor. I enjoy trying to solve new and interesting problems and learning from my mistakes to become a better programmer. I also really enjoy learning and experiencing new and different types of technology. I have experience with C# and SQL from my previous work at Tyeware. And have gained heaps of experience with JavaScript through my superthesis project where I am building a webapp (and a phoneapp) for a smarthome ecosystem. My superthesis project has also given me experience with SPA design and development using React.

Thank you for your time and I look forward to hearing a response,
Daniel
